

# It is our job to throw a little light on the subject of Fine Art

## Project

For this prestigious Art Gallery in London the paramount concern was that the extremely valuable works of art would be suitably protected from damaging UV rays as well as the buildup of Solar heat Gain.

In addition to the main showroom windows there were a number of skylights sited within the rear studios where similar protection was also required. At the same time the shading provision had to provide the right backdrop for the Gallery.

## Solution

Grants installed roller blinds to the showroom windows the darker colour giving maximum visibility to the outside during daylight hours whilst reducing UV. In the skylight areas, Dim out material was used for increased solar and light control

## Specification

Manual Endurashade Roller Blinds using Endurascreen fabric. Dual tensioned skylight roller blinds made with Dim-out material.
