

A product of Individual Thinking

Project

This Unique glazed atria reception area was a stunning welcome to this well presented theatre in Milton Keynes.

Whilst the area created a very light, fresh and bright atmosphere for the reception staff, the glare and heat transmission was extremely problematic. The glazed roof had a steep pitch and reliability of the shading was paramount to ensure total control at all times.

Solution

Grants shading offered a very simplistic roller blind solution that gave total control of light and heat throughout the whole year. This ensured that the blinds could be independently operated to give precision movement to block the seasonal levels of sunlight.

Specification

8 x Endurashade Motorised roof roller blinds made using Sunscreen material in white. This heavy duty system ensured reliability with the steep roof pitch. Controlled via a radio remote handset which could be operated by upto 50 metres away.
